Title: Sewer Rate Change

President: Brad McCoy

Sewer Fee Calculation

The council wishes to raise the average sewer bill for each customer by \$2.00 per month.

Here is the current equation that has been used: **$13 + 3.4/1000 * 5000 = \$30.00$**

The way to calculate a new formula change is to first decide if the minimum charge for no usage will change or not. 13 is the minimum charge. This amount will not be changed at this time. The rate of 3.4 will therefore become the variable in the equation. Here is the new equation to solve for the new rate.

$$13 + X/1000 * 5000 = \$32.00$$

Solving for X:

$$5X = 19$$

$$X = 19/5$$

$$X = 3.8$$

Therefore the new equation for calculating the sewer bill is:

$$13 + 3.8/1000 * \text{GallonsOfUsage} = \text{SewerCharge}$$
